INTRODUCTION

INTRODUCTION

This report is meant to be a reference guide to census data users, who wish to acquaint themselves with the range of data available from the 1971 Census of Canada Volume Series. The Volume Series can be classified into three major types:

Demographic and Spatial Characteristics

- Vol. I (Part 1) Population: Geographical Distribution (1.1)
- Vol. I (Part 2) Population: General Characteristics (1.2)
- Vol. I (Part 3) Population: General Characteristics (1.3)
- Vol. I (Part 4) Population: Cross-classifications of Characteristics (1.4)
- Vol. I (Part 5) Population: Cross-classifications of Characteristics (1.5)

Housing and Family Characteristics

- Vol. II (Part 1) Households (2.1)
- Vol. II (Part 2) Families (2.2)
- Vol. II (Part 3) Housing Characteristics (2.3)
- Vol. II (Part 4) Housing Characteristics (2.4)

Economic Characteristics

- Vol. III (Part 1) Labour Force and Individual Income: Basic Distributions (3.1)
- Vol. III (Part 2) Labour Force: Occupations (3.2)
- Vol. III (Part 3) Labour Force: Occupations (3.3)
- Vol. III (Part 4) Labour Force: Industries (3.4)
- Vol. III (Part 5) Labour Force: Industries (3.5)
- Vol. III (Part 6) Income of Individuals (3.6)
- Vol. III (Part 7) Labour Force Activity: Work Experience (3.7)

There are many bulletins in each Volume Series; Volume I contains 51, Volume II contains 42, and Volume III contains 84 publications.¹ Most of these publications contain one or more tabulations of specific variables with short introductory definitional notes. To a census data user, it would be helpful to know exactly what range of tabulations exist covering specified variables in published form, and where they can be found. This report attempts to facilitate the user's work in this regard.²

The following part of this report consists of four sections: (1) "How to Use the Index"; (2) "Index to Tabulations" (the main part of the bulletin); (3) "Legends" (provides information on the categorization or detail of each variable); and (4) "Appendix" (shows a list of "Errata and Explanatory Notes" for 1971 publications).

¹ A detailed list of all these publications can be found in the 1975 Statistics Canada Catalogue (No. 11-204E) and also in the 1971 Census Catalogue (No. 11-506, Final Edition).

² Publications containing descriptive materials (without any tables, or with tables, which are taken from other publications in the above-mentioned Volume Series), such as Introductory Reports (e.g., Introduction to Volume I), reports showing maps and charts, etc., are not covered within this bulletin.

How to Use the Index

Since the main purpose of this bulletin is to introduce census data users to the range of information available on a topic in published form, index entries have been prepared for all tables in the following section. To begin, search for the name of the keyword, or the variable of one's interest before searching for a particular index entry. Every possible word or variable may not be listed in the Index. For example, "Italian population", "childless women", "adult population", etc., may not be listed. It will be necessary to look up the index entries referring to "ethnic group", "birthplace", or "language" to locate an entry about Italian population; "children born" must be found to locate an entry about childless women (i.e., women with no children); or "population by age" to locate an entry about adult population.

An index entry contains six different pieces of information: (i) the variables included in a table; (ii) a number referring to the "legend" or detail of each variable; (iii) universe; (iv) geographic descriptor (denoted by "For"); (v) the census year(s) to which the table refers; and (vi) the source of the table (Catalogue number, Bulletin number and Table number). An index entry may contain as many as 13 variables. Each variable may contain as many as 597 categories. Universe could be total population, school population, currently married women, occupied dwelling, or any other type of universe covered by census enumerations. The geographic descriptor, which is denoted by "For", could be Canada, provinces, census metropolitan areas, or any other of a number of geographic areas possible. Generally, information contained in an index entry refers to the census year of 1971, but sometimes to earlier years, such as 1961, 1966, etc. The last information contained in an index entry, or the reference source, is where the actual tabulation can be found. This relates to the Catalogue and Bulletin numbers of a particular publication and

the Table number to which an entry refers. Let us take a simple example to explain the above points:

Example 1

Description	Catalogue No.	Bulletin No.	Table No.
Schooling (13), sex (2):			
Universe: Population 5 years and over.			
For: - Canada and provinces, 1971 ...	92-720	1.2-8	36

This index entry which can be found on page 200 of this report refers to a cross-classification of two variables: schooling and sex. Attached to the appearance of each variable, there is a number in parentheses. This number refers to the number of categories or detail presented for that variable. In the above example, "schooling (13)" means that this variable has been classified into 13 categories. In order to know what the actual categories of these variables are, it is necessary to look into the third section of this report known as "Legends". Note that the number shown in the parentheses does not include in the count "total" or "all" categories, but does include subtotals, means, medians, and other descriptive indices.

In the above example, "Universe" is "Total population 5 years and over", which means that the cross-classification of schooling and sex in this table is applicable only to the universe of population aged 5 years and over. "For", in this entry, refers to the geographic description. In this particular example, the tabulation is produced for Canada and provinces. The reference period for the table is 1971. The last information in the above example is

VIII

Catalogue No. 92-720, Bulletin No. 1.2-8, and Table 36, which is the source of the actual cross-classification of schooling and sex.

If the user is interested in accessing the actual tabulation to which the above example refers, he/she will find the data displayed on page VII.

The above as stated is a very simple example. In fact, data users may be interested in more complex cross-classifications than shown in the above illustration. For example, if one is interested in tabulations of married women by the number of children born, age, and birthplace, one could start the search with any of these four variables. It should be noted that it is better to start the search with the key concept involved rather than with a word or phrase which does not have as much substantive meaning. For example, a search for "children born" will be more meaningful than a search for "number of children born". Thus, one finds the following index entry:

Example 2

Description	Catalogue No.	Bulletin No.	Table No.
Children born (9), age (14), birthplace (2): Universe: Women ever married. For: - Canada and regions, 1971	92-751	1.5-11	29

In this example, "children born" has been classified into nine categories, "age" into 14 categories, and "birthplace" into two categories. It should be mentioned again that the description of these categories is shown in the section on "Legends".

It is important to note that the above index entry has also been listed in two additional orders: (i) age (14), birthplace (2); children born (9); and (ii) birthplace (2), age (14); children born (9).

Thus, whether one starts the search with "age" or with birthplace", the same information will be found. Similarly, each index entry has been arranged and listed in as many different orders as are applicable. In general, the number of variables in a table is equal to the number of index entries. However, there is an important exception to this rule: no index entry starts with the variable "sex" (except for "sex ratio").

There are some more complex and non-typical entries whose interpretation should perhaps be made clearer to users. As, for example, the following entry:

Example 3

Description	Catalogue No.	Bulletin No.	Table No.
Migration status (7), age (*), schooling (5), school attendance (2A), sex (2):			
Universe: Population 15 years and over.			
For: — Canada, 1971 (*Age 9A)	92-745	1.5-5	16
— Provinces, 1971 (*Age 4)	92-745	1.5-5	17

This particular entry as demonstrated earlier (Example 2) generates three additional entries: (i) age (*), schooling (5), migration status (7), school attendance (2A), sex (2); (ii) school attendance (2A), age (*), schooling (5), migration status (7), sex (2); (iii) schooling (5), age (*), migration status (7), school attendance (2A), sex (2).

This example shows a cross-classification of population 15 years and over by migration status, school attendance, schooling, age and sex. It differs from a typical index entry in several respects. First, it refers to more than one source (i.e., Tables 16 and 17 of Bulletin 1.5-5, Catalogue No. 92-745). Secondly, there are two geographic descriptors – Canada and provinces, respectively. Thirdly, instead of denoting a number in parentheses to the label "age" in the title of the index entry, there is an asterisk, which suggests that the reader look for a detailed specification of the categorization of the variable "age". Since the tabulation which refers to Canada is shown by nine age groups, and the tabulation which refers to the provinces is shown by four age groups, there is a specification to this effect in the geographic descriptor "For". This procedure has been adopted in other instances throughout the Index to avoid duplicating listings where only slight dissimilarities occur in the detail presented.

APPENDIX

APPENDIX

The errors and explanatory notes for published bulletins are made known to users through two sources: (i) by issuing official ERRATA which are contained in the affected bulletin itself, and (ii) by preparing qualifications to the published data, which are included in Introductory Reports (e.g., Introduction to Volume I). This appendix lists the ERRATA and explanatory notes (Column 6) along with the above-mentioned two sources (Columns 4 and 5), by affected publications (Columns 1 and 2) and affected tables (Column 3).
